Abstracts

Trastuzumab biosimilars are biologic medical products that are highly similar to the reference product, trastuzumab, a monoclonal antibody used in the treatment of HER2-positive breast and gastric cancers. These biosimilars undergo rigorous comparative analytical, non-clinical, and clinical studies to demonstrate that there are no clinically meaningful differences in terms of safety, purity, and potency from the reference product, allowing them to be approved as interchangeable or highly similar therapeutic alternatives. The development and adoption of trastuzumab biosimilars are driven by the need to increase patient access to this critical therapy by offering more affordable options while maintaining the same efficacy and safety profile as the originator drug.

The global Trastuzumab Biosimilar market size was estimated at USD 3125.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
