In 2024, global tray bracket shock absorber production reached 580,000 units, with an average selling price of US\$162 per unit. Tray bracket shock absorbers are shock absorber assemblies with a fixed mounting structure, such as a bracket or flange, that absorb vibration and shock and dissipate energy through oil (or gas) damping and elastic elements. Their primary function is to support equipment or structures while simultaneously absorbing and dissipating external vibration and shock energy through internal mechanisms, reducing vibration transmission, protecting equipment integrity, and improving system stability. They are used in fields such as construction, transportation, and industrial equipment. From a supply chain perspective, the upstream sector primarily involves raw materials such as metals (such as steel), rubber, and plastics, as well as core components such as springs, hydraulic cylinders, and damping valves. The downstream sector targets end-use applications in automotive manufacturing, construction, industrial equipment, and rail transit. Gross profit margins are typically between 25% and 35%.

The global Tray Bracket Shock Absorber market size was estimated at USD 93.96 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
