Abstracts

Triethylene glycol (TEG) is a colorless, odorless, hygroscopic liquid belonging to the glycol family, primarily produced as a derivative of ethylene oxide through catalytic hydration. It is widely recognized for its exceptional moisture-absorbing properties, low volatility, and high boiling point, making it particularly valuable as a desiccant in natural gas dehydration systems where it removes water vapor to prevent hydrate formation and pipeline corrosion. Beyond this primary application, TEG serves as a plasticizer in the production of polyvinyl chloride (PVC) and other polymers, a humectant in printing inks and textiles, a solvent in various chemical processes, and an intermediate in the synthesis of resins, plasticizers, and specialty chemicals. Its non-toxic nature also allows for use in air sanitization products and as a conditioning agent in tobacco processing, highlighting its versatility across industrial and consumer sectors.

The global Tri Ethylene Glycol (Teg) market size was estimated at USD 1520.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
