## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tri structural Isotropic Fuel competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Tri structural Isotropic fuel is a type of nuclear fuel designed for high temperature gas cooled reactors and other advanced reactors. It consists of microscopic fuel particles, each containing a fissile material (like uranium) surrounded by multiple layers of protective coatings. These layers, typically made of carbon and ceramic materials, act as individual containment systems, preventing the release of radioactive fission products even under extreme conditions. This design makes TRISO fuel exceptionally robust and accident-tolerant.

The global Tri structural Isotropic Fuel market size was estimated at USD 251.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 25.20% during the forecast period.
