Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Trialkylphosphine Oxide competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Trialkylphosphine Oxide production reached approximately 32.5k tons, with an average global market price of around US\$ 6.5k per ton. Trialkylphosphine Oxides (TRPOs) are organophosphorus compounds characterized by a phosphorus-oxygen double bond (P=O) and three alkyl substituents. They serve as highly effective polar solvents and complexing agents with strong coordination ability toward metal ions. TRPOs are widely used as extractants, catalyst ligands, ionic liquid components, and polymer additives. They play an important role in hydrometallurgy, rare earth separation, nuclear fuel reprocessing, petrochemicals, and pharmaceuticals, particularly for selective extraction of metals like cobalt, nickel, molybdenum, uranium, and rare earths. Upstream raw materials for TRPO mainly include phosphorus trichloride (PCl₃), alkyl halides (such as alkyl bromides and chlorides), and organic solvents like toluene or hexane. Key suppliers are BASF, Dow Chemical. Downstream applications cover hydrometallurgy, nuclear fuel reprocessing, rare earth extraction, catalyst production, and pharmaceutical synthesis, with end users such as CNNC, Ganzhou Rare Earth Group, and Sumitomo Chemical. The annual production capacity of a single-line Trialkylphosphine Oxide is approximately 3.8k tons, with a gross profit margin of approximately 20%-30%.

The global Trialkylphosphine Oxide market size was estimated at USD 211.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
