## Abstracts

Report Overview:

A triazine is class of nitrogen-containing heterocycles. The parent molecules' molecular formula is  $C_3H_3N_3$ . They exist in three isomeric forms, 1,3,5-triazines being common.

MMA Triazine is a cyclic tertiary triamine. It is mainly used as a scavenger for sour gases like  $H_2S$  and mercaptans in gaseous or liquid hydrocarbon streams.

MEA-triazine is the most commonly used chemistry for applications requiring a non-regenerative  $H_2S$  scavenger. Other chemistries are available (MMA-triazine, glyoxal, zinc-based, iron-based, and others) but MEA-triazine has the highest market share because it is the lowest cost in use solution. Triazines are low cost in use despite the fact that the molar efficiency of the chemistry in capturing  $H_2S$  is significantly below theoretical maximum efficiency.

The Global Triazine Market Size was estimated at USD 415.20 million in 2023 and is projected to reach USD 481.51 million by 2029, exhibiting a CAGR of 2.50% during the forecast period.
