Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tributyl Phosphate Defoamer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Tributyl phosphate defoamer is an organophosphorus defoamer with tributyl phosphate as its primary active ingredient. It is a colorless, transparent liquid with extremely low surface tension and excellent chemical stability. It rapidly diffuses across the air-liquid interface, reducing the surface viscosity and stability of the foam film, promoting bubble collapse and inhibiting foam regeneration. It is widely used in foaming systems such as coatings, printing and dyeing, papermaking, chemical reactions, and industrial cleaning. This defoamer is resistant to high temperatures, acids, and alkalis, and is well-adapted to both water-based and oil-based systems. It offers a highly effective, low-dosage defoaming solution that minimizes system performance. In 2024, the global production of tributyl phosphate defoamer will reach 75,150 tons, with an average selling price of US\$1,531 per ton.

The global Tributyl Phosphate Defoamer market size was estimated at USD 115.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
