Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Trichlorofluoromethane competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Trichlorofluoromethane production reached approximately 2,600 tons, with an average global market price of around US\$ 20,000 per ton. Trichlorofluoromethane is a chlorofluorocarbon (CFC) compound with the chemical formula CCl_3F , consisting of one fluorine atom and three chlorine atoms bound to a single carbon atom. It is a colorless, volatile liquid or gas with a faint sweet odor, historically used as a refrigerant (designated CFC-11 or R-11), a propellant in aerosol sprays, and a foam-blowing agent. Due to its high ozone-depleting potential and long atmospheric lifetime, its production and use have been largely phased out under the Montreal Protocol, although it can still be found in older equipment and as a trace environmental pollutant. The key market drivers for Trichlorofluoromethane (CFC-11) are mainly linked to its legacy use and environmental regulations: residual demand arises from maintaining and servicing older refrigeration and air-conditioning systems that still operate with CFC-11, while the demolition of old buildings and appliances drives recovery and destruction activities for foam insulation containing the compound. Additionally, regulatory agencies require small quantities for calibration and atmospheric monitoring to ensure compliance with the Montreal Protocol, and occasional illegal production or trade creates enforcement-driven market dynamics. The broader transition to eco-friendly refrigerants further sustains demand for reclamation, safe disposal, and retrofitting services related to existing CFC-11 stocks.

The global Trichlorofluoromethane market size was estimated at USD 52.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.10%

during the forecast period.
