Report Overview

Triethanol Amine Lauryl Sulfate is a surfactant compound derived from the combination of triethanolamine and lauric acid. It is a widely used ingredient in the formulation of personal care and cleaning products due to its excellent foaming, emulsifying, and cleansing properties. As a surfactant, it helps to lower the surface tension of water, allowing it to mix with oils and dirt, making it easier to remove them from surfaces or skin. Triethanol Amine Lauryl Sulfate is particularly effective in creating a rich, creamy lather, which is why it is commonly found in shampoos, body washes, and detergents. It is also known for its mildness and compatibility with the skin, making it suitable for use in products intended for sensitive skin types. However, it is important to note that the concentration and specific formulation can affect its performance and safety profile, and it should be used in accordance with safety guidelines and regulations.
