Abstracts

Trifluoroethane (R143a) is a hydrofluorocarbon (HFC) refrigerant primarily used as a component in refrigerant blends, most notably in R404A and R507, which are widely employed in commercial refrigeration systems, industrial chillers, and some air conditioning applications due to their favorable thermodynamic properties, including high cooling capacity and energy efficiency; however, it is also recognized for its high global warming potential (GWP), which has led to increased regulatory scrutiny and a gradual phase-down in many regions under international agreements such as the Kigali Amendment to the Montreal Protocol.

The global Trifluoroethane (R143A) market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.75% during the forecast period.
