Trigger point injections (TPIs) are a type of localized treatment used to relieve muscle pain caused by myofascial trigger points—tight, sensitive areas within a muscle that can cause pain, stiffness, and discomfort. These trigger points are often the result of muscle overuse, injury, stress, or poor posture. Trigger point injections involve injecting medication directly into the muscle or the trigger point to reduce pain, inflammation, and muscle spasms. The goal is to inactivate the trigger point and provide relief from chronic muscle pain.
