Abstracts

Trimethylolpropane trioleate is a synthetic ester derived from trimethylolpropane and oleic acid, primarily functioning as a high-performance lubricant, plasticizer, and emollient in various industrial and consumer applications due to its excellent thermal stability, low volatility, and biodegradability. It is characterized by its non-toxic nature and resistance to oxidation, making it suitable for use in environmentally sensitive formulations such as biodegradable lubricants, cosmetics, personal care products, and as a plasticizer in polymers where low migration and good compatibility are required. Its chemical structure, featuring three oleate chains esterified to a trimethylolpropane core, imparts properties like low pour point and high viscosity index, which are critical in enhancing the performance and durability of end-products across sectors including automotive, textiles, coatings, and adhesives.

The global Trimethylolpropane Trioleate market size was estimated at USD 95.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
