Report Overview

Trimethylpropane (TMP), is an organic compound which contains three hydroxyl functional groups. It is a white crystal in its solid state and when melted it is a transparent liquid. TMP is a hygroscopic compound and should be stored carefully in order to avoid moisture absorption. This compound is readily soluble in water, alcohol and in acetone. It is a very stable compound and does not cause any specific danger to the environment. TMP is usually manufactured in the form of semi transparent white flake and when melted forms a transparent melted liquid.

TMP finds its use in industrial, professional and consumer application. It is mainly used in adhesives, sealant, coatings, inks, lubricants, greases, metal working fluid, polishes, wax-blends, polymers and plastics, surface treatment of pigments among others. TMP is also used in saturated polyesters for coil coatings, alkyds for paints, acrylic acid esters for curing, polyurethanes for paint coatings and in elastomers, and esters for synthetic lubrication. Out of these TMP is mostly used in the alkyl resin plant, polyetherane coatings and printing ink. This compound is used as a building block in the polymer industry. it is also used as a base lubricant for motor oils. TMP does not have cause any harmful effects either to consumers or to the environment. It is very less toxic to aquatic life.
