Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Trimethylsilylacetylene competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Trimethylsilylacetylene reached approximately 380 tons, with an average global market price of around USD 340 per kg. Trimethylsilylacetylene is an organosilicon compound with the chemical formula C_3H_7Si , commonly represented as TMS-acetylene or $(CH_3)_3SiC\equiv CH$. It is a colorless, volatile liquid used primarily as a protected form of acetylene in organic synthesis. The trimethylsilyl (TMS) group serves as a protecting group for the terminal alkyne, enhancing stability and selectivity in reactions such as Sonogashira couplings or nucleophilic additions. The TMS group can be easily removed under mild conditions (e.g., with fluoride ions), regenerating the free acetylene moiety. This makes Trimethylsilylacetylene a valuable reagent in pharmaceuticals, materials science, and synthetic organic chemistry. The key market drivers for Trimethylsilylacetylene stem from its essential role as a protected alkyne in pharmaceutical synthesis, organic electronics, and advanced material development. Its stability and compatibility in palladium-catalyzed cross-coupling reactions, particularly the Sonogashira reaction, make it a critical intermediate in the production of active pharmaceutical ingredients (APIs), agrochemicals, and functionalized materials. The growing demand for custom synthesis in drug discovery and semiconducting materials in OLEDs, sensors, and thin-film transistors further fuels market growth. Additionally, the compound's ease of deprotection to release terminal alkynes under mild conditions supports its widespread adoption in modular synthesis strategies, especially in high-value, precision chemistry.

The global Trimethylsilylacetylene market size was estimated at USD 127.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
