Abstracts

The Trinova Ebooster System is an advanced automotive forced induction technology designed to enhance engine performance, efficiency, and responsiveness by combining an electric turbocharger with a conventional exhaust-driven turbocharger in a sequential setup. This hybrid system addresses turbo lag—the delayed response common in traditional turbocharged engines—by using an electric motor to spool the compressor wheel almost instantaneously at low engine speeds, ensuring immediate throttle response and smoother power delivery across the rev range. By optimizing air intake and combustion efficiency, the system contributes to reduced fuel consumption and lower emissions, aligning with stricter global environmental regulations, while also supporting downsized engines that maintain high power outputs without sacrificing drivability. Its integration is particularly relevant for modern internal combustion engines, hybrid powertrains, and performance-oriented vehicles seeking a balance between dynamic driving characteristics and sustainability.

The global Trinova Ebooster System market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
