Abstracts

Trioctyldodecyl citrate is a synthetic ester derived from citric acid, consisting of a citric acid backbone esterified with a combination of octyl and dodecyl alcohol groups, which imparts it with properties such as excellent emolliency, low volatility, and high stability. Primarily utilized as an emollient, solvent, and plasticizer, it finds significant application in personal care and cosmetics?particularly in sunscreens, makeup, and skin care formulations?where it enhances spreadability, texture, and product feel while also serving as a carrier for active ingredients. Additionally, it is employed in certain industrial applications, including plastics and coatings, where it acts as a non-phthalate plasticizer offering improved flexibility and compatibility with various polymers. The compound is valued for its mildness, biodegradability, and compliance with regulatory standards for consumer safety, making it a preferred ingredient in products targeting eco-conscious and sensitive-skin markets.
