Abstracts

A triple angle glossmeter is a specialized optical instrument used to measure the specular reflection of a surface at three distinct angles of incidence—typically 20°, 60°, and 85°—providing a comprehensive assessment of gloss levels across materials with varying finishes. This device is essential in industries where surface appearance and quality consistency are critical, as it allows for precise quantification of gloss for surfaces ranging from high-gloss automotive paints and industrial coatings to matte plastics and low-sheen papers. By utilizing multiple angles, the glossmeter ensures accurate readings regardless of material reflectivity, offering a standardized, objective method for quality control, compliance with industry specifications, and comparative analysis in manufacturing and finishing processes.

The global Triple Angle Glossmeters market size was estimated at USD 87.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
