Abstracts

Triple Lumen Silicone Urinary Catheter is a fully functional, safe and reliable medical device, which consists of a catheter head, a balloon, a tube body, a developing line and three functional chambers, namely, a liquid outlet, a water injection hard valve and a flushing injection port. In terms of material, the triple lumen silicone catheter is mainly made of high-quality silicone, which is soft and biocompatible, and can reduce the discomfort of patients. The main functions of the triple lumen silicone catheter include drainage of urine, bladder flushing and fixed catheter. By draining urine, the problem of urination difficulties can be solved; the bladder flushing function can keep the urinary tract clean and unobstructed, especially for patients who need flushing after prostate hyperplasia surgery, bladder bleeding or turbid urine; the fixed catheter can ensure the stability of the catheter in the bladder to prevent it from falling out. The triple lumen silicone catheter is mainly used in situations where continuous bladder flushing is required, such as after prostate hyperplasia surgery, bladder bleeding or turbid urine. In addition, it is also suitable for patients who need long-term indwelling catheterization.
