Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tris Buffer Solution competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of Tris buffer solution reached 10.54 million liters, with an average selling price of US\$45/liter. Tris(hydroxymethyl)aminomethane, often abbreviated as Tris, is an organic compound (molecular formula $C_4H_{11}NO_3$) that appears as white crystals or powder. It is a weak base with a pKa of 8.1 at 25°C, which generally results in an effective buffering range of pH 7.0 to 9.2. Its aqueous solution (Tris base) has a pH of approximately 10.5. This is typically adjusted to the desired pH by adding hydrochloric acid to obtain a buffer solution of a specific pH value. The upstream raw materials for Tris buffer primarily include tris (Tris base) and an acid (such as hydrochloric acid, HCl) or base (such as sodium hydroxide, NaOH) for pH adjustment. Deionized water is also an essential solvent in its preparation. Tris buffer has a wide range of downstream applications, primarily in biochemistry and molecular biology. It is commonly used as a biological buffer in processes such as protein purification, enzymatic experiments, DNA and RNA manipulation, and cell culture. It is also a pharmaceutical intermediate used in the preparation of surfactants, vulcanization accelerators, and some drugs. In specific experimental procedures, familiar nucleic acid electrophoresis buffers such as TAE and TBE, as well as TE buffer used for stable DNA storage, all contain Tris as their core component. Looking ahead, the overall Tris buffer solution market is expected to maintain strong growth, primarily driven by the rapid development of the pharmaceutical industry and biotechnology. A notable trend is the increasing demand for product purity. Ultrapure Tris (which must meet 99.9% purity and be produced under GMP regulations) is expected to see significantly higher market growth than the overall market due to its applications in key areas such as protein

purification, pharmaceutical excipients, and high-end in vitro diagnostic reagents. Furthermore, Chinese companies are actively developing high-end production capacity. For example, Desheng New Materials has invested in a high-end biological buffer project in Huanggang, Hubei Province, with an annual output of 2,000 tons of Tris. This reflects market demand for high-quality products and the upgrading trend of local companies.

The global Tris Buffer Solution market size was estimated at USD 474.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
