Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tris(trimethylsilyl)phosphine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Tris(trimethylsilyl)phosphine reached approximately 6300 tons, with an average global market price of around USD 20 per kg.

Tris(trimethylsilyl)phosphine is an organophosphorus compound in which a phosphorus atom is bonded to three trimethylsilyl ($\text{Si}(\text{CH}_3)_3$) groups. It appears as a colorless to pale yellow liquid or solid, depending on temperature, and is air- and moisture-sensitive, requiring storage under inert atmosphere. This compound is widely used in organometallic synthesis and catalysis, particularly as a source of phosphorus(III) and as a ligand precursor. Due to its bulky and highly lipophilic nature, it can stabilize low-coordinate metal centers. Additionally, it serves as a reductant and is sometimes employed in the preparation of metal phosphide complexes and in semiconductor precursor chemistry.

The global Tris(trimethylsilyl)phosphine market size was estimated at USD 126.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
