Report Overview

Triticum vulgare germ oil is obtained from wheat germ (*Triticum aestivum* L.). Wheat is thought to be one of the first grains ever cultivated.

Triticum vulgare germ oil is highly rich in linoleic acid (omega-6). This fatty acid is essential because the body cannot synthesize it. It is known for the important role it plays in the structure of cell membranes.

It reduces transepidermal water loss by restoring the hydro-lipidic film.

This oil also contains oleic acid, which has emollient properties. It makes the skin soft, supple, and more radiant.

Thanks to its high levels of alpha-tocopherols, also known as vitamin E, it has the biological antioxidant properties of poly-unsaturated fatty acids in the cell membranes and lipoproteins. It prevents skin ageing.

Wheat germ oil has regenerating properties and is an excellent skin moisturizer. It is recommended for face and hair care. It is also used as a dietary supplement (gel caps).
