Abstracts

Tritium Labeling Service refers to a specialized scientific service that involves the controlled introduction of tritium (^3H , hydrogen-3), a radioactive isotope of hydrogen, into target molecules (such as small organic compounds, peptides, proteins, nucleotides, or pharmaceuticals) through chemical, biochemical, or isotopic exchange reactions. Its core objective is to produce radiolabeled compounds that retain the chemical and biological properties of their non-radioactive counterparts while enabling sensitive detection via tritium's low-energy β radiation (18.6 keV) and long half-life (12.3 years). The service typically encompasses end-to-end support, including custom synthesis route design, tritium incorporation (e.g., catalytic tritiation, reductive tritiation, enzymatic labeling, or Wilzbach exchange), purification (to achieve high radiochemical and chemical purity), quality control (verification of specific activity, labeling position, and stability), and documentation for research or regulatory compliance.

The global Tritium Labeling Service market size was estimated at USD 98.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
