Report Overview

Tritium rain tube sampler is a device used to collect rainwater samples for tritium analysis. Tritium is a radioactive isotope of hydrogen, commonly used in nuclear weapons and reactors, as well as in some medical and research applications. The sampler typically consists of a cylinder made of tritium resistant materials, such as stainless steel or titanium, placed in a location where rainwater can be collected. Then, the rainwater is collected in a cylinder and analyzed to determine the presence of tritium concentration. This information can be used to monitor tritium levels in the environment and ensure that they are within a safe range.

The global Tritium Rain Cylinder Sampler market size was estimated at USD 85.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
