Report Overview

A trocar is a medical device that is made up of an obturator (which may be a metal or plastic sharpened or non-bladed tip), a cannula (basically a hollow tube), and a seal. Trocars are placed through the abdomen during laparoscopic surgery. The trocar functions as a portal for the subsequent placement of other instruments, such as graspers, scissors, staplers, etc.

The growing reliance on laparoscopy is resulting in an increased demand for trocar and cannula as they are extensively used to insert a laparoscope to view the internal body structures. Research analysis on the global trocars market identifies the rising volume of laparoscopic procedures to be one of the major factors that will have a positive impact on the growth of the market.

The Global Trocars Market Size was estimated at USD 420.56 million in 2021 and is projected to reach USD 673.96 million by 2028, exhibiting a CAGR of 6.97% during the forecast period.
