## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Trochoid Pump competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A trochoid pump is an internally inscribed positive displacement pump that transports fluid by meshing an external gear with an internal gear. It is called a trochoid pump because the tooth profile of the external and internal gears is shaped like a trochoid curve. A trochoid curve is a curve drawn by a fixed point inside or outside a circle when the circle is rolled without sliding along a certain curve. When an internal gear is driven, the meshing external gear also rotates in the same direction. This makes them compact, and they have features such as low-gear sliding speed, low noise, and low-pressure pulsation. Although trochoidal pumps are most commonly used for pumping oil, they can also be used for coolants, fuels, and special liquids. The global market situation of trochoid pumps is characterized by stable growth, intense competition among enterprises, and extensive applications. The global trochoid pump market is highly competitive, with many well-known enterprises. Nippon Oil Pump (NOP) is a leader in this field. It has a history of more than 100 years in the R & D, production, and sales of fluid transfer products. The demand for trochoid pumps in developed regions such as Europe and the United States is relatively stable. These regions have a strong manufacturing base, and trochoid pumps are widely used in machine tools, industrial equipment, and other fields. In recent years, the Asian market, especially the Chinese and Southeast Asian markets, has shown strong growth momentum. China has a large-scale manufacturing industry, and the demand for trochoid pumps in the fields of machine tools, ships, and wind power generation is constantly increasing. Southeast Asia is also attracting more and more manufacturing enterprises to invest and set up factories, which has driven the demand for trochoid pumps. Trochoid pumps are widely used in various fields. In the

machine - tool industry, they are mainly used for the transmission of cooling oil and lubricating oil. They are also widely used in ships, agricultural machinery, and wind - power generation gearboxes due to their advantages of compact size, low noise, and stable oil flow. In addition, in the vacuum industry, trochoid pumps are suitable for large - displacement exhaust devices and are used in vacuum metallurgy, vacuum heat treatment, vacuum drying, and other processes. With the continuous development of the manufacturing industry, the requirements for trochoid pumps are also constantly improving. High - precision, high - efficiency, and low - noise trochoid pumps are more and more popular in the market. At the same time, according to different application scenarios, trochoid pumps with special structures and functions, such as trochoid pumps with suction filters and trochoid pumps suitable for high - temperature working environments, are also gradually emerging, meeting the specific needs of different industries.

The global Trochoid Pump market size was estimated at USD 967.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
