Abstracts

Tropisetron hydrochloride is a selective 5-HT₃ receptor antagonist primarily used as an antiemetic to prevent nausea and vomiting induced by chemotherapy, radiotherapy, and post-operative conditions. It functions by blocking serotonin receptors in the central and peripheral nervous systems, effectively reducing the stimulation of the vomiting center. The compound is available in both oral and injectable formulations, offering flexibility in clinical administration based on patient needs and medical settings. As a second-generation serotonin antagonist, it is often compared to other drugs in its class, such as ondansetron and granisetron, with studies highlighting its efficacy, safety profile, and potential additional benefits like anti-inflammatory and neuroprotective properties. Its use is well-established in oncology and anesthesiology, supported by clinical guidelines and a body of evidence demonstrating its role in managing emetogenic challenges.

The global Tropisetron Hydrochloride market size was estimated at USD 185.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
