Abstracts

Truck auxiliary power units (APUs) are independent systems installed on heavy-duty trucks to provide electrical power and climate control without requiring the main engine to idle, thereby reducing fuel consumption, engine wear, and emissions. These compact, self-contained units typically include a small diesel engine or battery-electric system, an alternator or inverter for electricity generation, and heating/cooling components to maintain cabin comfort, allowing drivers to operate amenities like air conditioning, microwaves, or electronics during rest periods while meeting increasingly strict anti-idling regulations.
