## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Truck Loading and Unloading Ramps competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global truck loading ramp production reached 2,342,890 units, with an average selling price of \$225 per unit. Truck loading ramps (also known as loading ramps or loading ramp platforms) are inclined structures used to facilitate the entry and exit of vehicles into cargo areas and the loading and unloading of goods. They typically connect the ground with the cargo loading and unloading area (such as docks, warehouse floors, or truck compartment entrances). By creating a continuous slope between the ground and the truck platform, they facilitate loading, unloading, pushing, pulling, and short-distance movement of goods. They are widely used in logistics, freight, warehousing, and other scenarios, improving operational efficiency, reducing labor intensity, and enhancing safety.

The global Truck Loading and Unloading Ramps market size was estimated at USD 527.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
