Abstracts

A truck wheel wash system is an automated or semi-automated cleaning installation designed to remove mud, dirt, debris, and other contaminants from the wheels, undercarriages, and bodywork of trucks and heavy-duty vehicles, typically at facility exit points to prevent the spread of pollutants onto public roads and comply with environmental and site regulations. These systems often utilize high-pressure water jets, rotating brushes, and sometimes chemical cleaning agents to ensure thorough cleaning, with modern versions incorporating water recycling and filtration mechanisms to minimize water consumption and environmental impact. The primary function is to maintain cleanliness standards, reduce road wear, prevent soil and water contamination, and adhere to legal requirements in industries such as construction, mining, waste management, and logistics where off-road vehicle operation is common.

The global Truck Wheel Wash System market size was estimated at USD 125.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
