## Abstracts

True union ball valves are specialized valves that are designed for use in fluid flow control applications. They consist of a ball that rotates inside the valve to control the flow of fluid and a union connection on either end of the valve body, allowing it to be easily removed for maintenance and repairs. True union ball valves have two separate pieces that connect to the pipe. This means that the valve can be removed without having to disassemble the entire pipe system. This feature makes maintenance and repair work much easier and less time-consuming. True union ball valves are available in a variety of materials, additionally, they come in various end connections, such as threaded, flanged, or socket-welded, to accommodate different types of pipes.

The global True Union Ball Valve market size was estimated at USD 1652.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
