## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on TSN Switch SoC competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. TSN Switch SoC is a system-on-chip that integrates time-sensitive networking functions with switching and scheduling units to provide deterministic forwarding and precise timing control under strict latency and synchronization constraints, suitable for high-reliability real-time network systems. In 2024, the production of TSN Switch SoCs was 131,579 units with an average price of 380 USD per unit. In 2024, the annual capacity per production line was approximately 1,000 units, with an average gross margin of around 61%. The upstream primarily comprises silicon wafers and wafer materials, packaging and test materials, and high-precision fabrication equipment such as lithography, etch and ion implantation systems, with representative suppliers including SUMCO, GlobalWafers, Shin-Etsu and Shanghai Silicon Industry Group; packaging and test suppliers include Amkor and JCET; equipment suppliers include ASML, Applied Materials, Lam Research and AMEC. The midstream focuses on chip system architecture design, integration of switching and time-synchronization functions, firmware and driver development, and functional and interoperability testing, emphasizing deterministic traffic scheduling, low-latency guarantees and system-level reliability validation. The downstream customers are mainly in industrial automation, automotive electronics, smart grid and other real-time control sectors, represented by companies such as Siemens, Bosch, ABB and State Grid Corporation of China.

The global TSN Switch SoC market size was estimated at USD 50.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 23.00% during the forecast period.
