Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on TSV Etching Equipment competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. TSV etching equipment focuses on creating channels with a high depth-to-width ratio inside silicon wafers. Today, the mainstream etching method uses dry etching technology, specifically reactive ion etching (RIE) or deep reactive ion etching (DRIE). These technologies achieve precise and efficient high-aspect-ratio etching of silicon wafers by exciting the formation of plasma on the surface of the silicon wafer and cleverly combining the dual effects of ion physical bombardment and chemical reaction. In 2024, the global production of TSV etching equipment will be 630 chambers, with an average price of 1.7 million USD/chamber. In the global semiconductor equipment market, through-silicon via (TSV) etching equipment, a key component of deep silicon etching, is gaining increasing attention. Samco and AMEC have become key players in this market, leveraging their technological advantages and product innovations. Samco's TSV etching equipment includes the RIE-400iPB and RIE-800iPB models, with the representative RIE-800iPBC being specifically designed for MEMS and TSV production. AMEC, a leading Chinese semiconductor equipment manufacturer, offers the Primo TSV? series of equipment specifically designed for high-performance TSV etching applications. With the rapid development of 3D integrated circuits, 2.5D packaging, and MEMS devices, market demand for TSV etching equipment is expected to continue to grow.

The global TSV Etching Equipment market size was estimated at USD 1070.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
