Report Overview

Tube Rocker is a laboratory equipment used for mixing liquids in test tubes or vials. It consists of a platform that oscillates horizontally, causing the tubes placed on it to rock back and forth. This gentle mixing action is ideal for applications such as mixing blood samples, staining gels, and hybridization reactions. Tube Rockers are commonly used in molecular biology, biochemistry, and clinical laboratories to ensure thorough and uniform mixing of samples without causing frothing or introducing air bubbles. The versatility and efficiency of Tube Rockers make them essential tools for various research and diagnostic procedures in the life sciences.
