## Abstracts

Tubeless insulin pumps, also known as patch insulin pumps, are small, wearable medical devices used to deliver insulin to individuals with diabetes without the need for traditional insulin delivery methods such as syringes or tubed pumps. These devices adhere directly to the skin and consist of a patch that contains both the insulin reservoir and a tiny cannula that administers the insulin subcutaneously. Tubeless insulin pumps allow for continuous, controlled insulin delivery and can be programmed to meet the user's specific needs, offering greater convenience and flexibility for diabetes management compared to traditional methods.
