## Abstracts

Tubing-Conveyed Perforating Service (TCP service) is a perforating operation method that uses tubing to lower the perforating gun system into the well. It is widely used in complex well conditions such as high pressure, high temperature, deep wells, and horizontal wells. Unlike traditional cable perforating, TCP service relies on tubing to transmit the perforating device and activates the detonator through pressure, mechanical or electronic means to open up the closed oil and gas layer channel. This service can be integrated with completion, isolation and fracturing operations. It has the advantages of high operational safety, strong adaptability and high efficiency. It is one of the indispensable key technical means in modern oil and gas development.

The global Tubing Conveyed Perforating Services market size was estimated at USD 1352.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
