Abstracts

Tubular compression bandages are elastic, seamless fabric sleeves designed to provide consistent compression and support to limbs or joints. These bandages are commonly used in medical and sports applications for managing conditions such as venous insufficiency, lymphedema, swelling, sprains, and post-surgical recovery. Unlike traditional compression wraps, tubular compression bandages offer uniform pressure without the need for complex wrapping techniques, making them easy to apply and comfortable for extended wear. They come in various sizes and compression levels to accommodate different treatment needs and body parts, such as arms, legs, and ankles. Made from a blend of elastic fibers and breathable materials, these bandages promote circulation while ensuring flexibility and patient comfort.
