## Abstracts

A tubular hemorrhoid stapler, also known as a circular stapler or procedure for prolapse and hemorrhoids (PPH) device, is a specialized surgical instrument designed for the minimally invasive treatment of hemorrhoidal disease by performing a stapled hemorrhoidopexy. This device consists of a circular stapling mechanism housed within a tubular applicator, which is inserted into the anal canal to resect a circumferential ring of prolapsed rectal mucosa and submucosa above the dentate line, thereby reducing blood flow to the hemorrhoidal cushions and repositioning prolapsed tissue back to its anatomical position. The procedure aims to alleviate symptoms such as bleeding, prolapse, and discomfort with reduced postoperative pain and shorter recovery times compared to traditional hemorrhoidectomy techniques.

The global Tubular Hemorrhoid Stapler market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
