### Report Overview:

Tubular membranes are not self-supporting membranes. They are located on the inside of a tube, made of a special kind of material. This material is the supporting layer for the membrane. Because the location of tubular membranes is inside a tube, the flow in a tubular membrane is usually inside out. The main cause for this is that the attachment of the membrane to the supporting layer is very weak.

The Global Tubular Membranes Market Size was estimated at USD 653.70 million in 2023 and is projected to reach USD 851.28 million by 2029, exhibiting a CAGR of 4.50% during the forecast period.
