### Report Overview:

A tumor mouse model, also known as a mouse xenograft model, is an experimental system where human tumor cells or tumor tissues are transplanted into immunodeficient mice. This model is widely used in cancer research to study tumor biology, test potential therapies, and understand the mechanisms of tumor growth, progression, and response to treatment.

Syngeneic mice retain an intact immune system; therefore, they are specifically used in immune-oncology studies. Cancer immunotherapies are designed to work in conjunction with a patient's immune system to increase natural anti-tumor response. Oncology Mice Models Market Segmented By Humanized Immune System Mice Models, Syngeneic Tumor Mice Models, Immunodeficient Mice Models, NOG Mice Models, Spontaneous Tumor Mice Models Product
