## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tumor Microwave Ablation Devices competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Tumor Microwave Ablation Devices production reached approximately 7380 units, with an average global market price of around K US\$ 74.2 per unit. A tumor microwave ablation (MWA) device is a medical system that utilizes high-frequency microwave energy (typically 915MHz or 2450MHz) for the precise and minimally invasive in-situ destruction of solid tumors. Its core operating principle involves percutaneously inserting a microwave ablation needle (antenna) into the center of the tumor, where it generates a high-frequency alternating electric field around the tip. This causes polar molecules (primarily water molecules) within the tissue to vibrate and collide billions of times per second, rapidly generating localized temperatures of 60-150°C. The prevailing market view is that tumor microwave ablation devices are rapidly evolving from an adjunctive therapy to a mainstream option in the field of interventional oncology. This growth is driven by the rising global incidence of cancer, the deep-rooted shift towards minimally invasive treatment paradigms, and the technological advancements of MWA itself—such as faster heating, larger ablation zones, and more predictable ablation shapes. Future competition will extend beyond mere device specifications to focus on intelligent, integrated solutions. This includes the integration of multi-modality image guidance (US/CT/MRI fusion), AI-powered surgical planning, real-time treatment assessment, and remote collaboration platforms. Manufacturers capable of delivering full-process value—from pre-operative planning and intra-operative execution to post-operative follow-up—and generating robust clinical evidence will secure a sustainable competitive advantage.

The global Tumor Microwave Ablation Devices market size was estimated at USD 548.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
