## Abstracts

Tuna peptide is a bioactive peptide extracted from tuna. It has multiple properties and functions and is used in many fields. Tuna itself is rich in protein, unsaturated fatty acids (such as DHA, EPA), vitamins (such as B12, B6 and pantothenic acid) and trace elements, and its extracted peptides also retain some nutrients. The molecular weight of tuna peptide is usually between 50 and 5000, and it is composed of 2 to 50 amino acids. It is easy for the human body to absorb, and the absorption speed and amount are better than protein and amino acids.

The global Tuna Peptides market size was estimated at USD 942.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
