## Abstracts

Tunable Mid-Infrared Laser is a kind of laser that can emit tunable light in the mid-infrared band and is widely used in fields such as spectroscopy, gas detection, medical surgery and material processing. The feature of mid-infrared lasers is that they can resonate with the molecular vibrations of non-metallic materials, liquids and gases, thereby achieving high-precision detection and processing. Common tunable mid-infrared lasers include quantum cascade lasers (QCL), optical parametric oscillators (OPO), and lasers based on micro-resonators. These lasers achieve wavelength tuning by changing the cavity length, temperature or the characteristics of the gain medium to meet the requirements of different applications.

The global Tunable Mid-Infrared Laser market size was estimated at USD 641.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
