Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tundish Refractory competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Tundish refractory play a crucial role in steel smelting. It is mainly used to carry molten steel and withstand harsh environments such as extremely high temperatures, erosion of molten metal, and thermal shock during the smelting process. Tundish refractory include amorphous refractory materials and fixed refractory materials. Amorphous refractory materials generally exist in the form of particles, powders, etc., and can be constructed through casting, spraying, or vibration forming. These materials are more suitable for devices with complex shapes, so they are common in the use of intermediate packaging. Shaped refractory materials, such as refractory bricks, refractory blocks, etc., have a fixed shape and are easy to install, suitable for intermediate packages with regular structures. Although its flexibility is poor, shaped materials still occupy a certain market share in some standardized and high-temperature operating environments. In 2024, global Tundish Refractory production reached approximately 2139 K MT, with an average global market price of around US\$ 625 per MT. In 2024, the refractory materials industry will face enormous challenges, due to both the imbalance of market supply and demand, as well as the industry's own accumulated problems and drawbacks. In 2024, the steel industry will present a situation of high output, high cost, high export, low demand, low price, and low efficiency. The refractory materials industry is highly correlated with the steel industry, and the steel industry has a significant impact on the price transmission of the refractory materials industry. In addition, the joint restructuring and inefficient capacity exit mechanism in the refractory materials industry is not yet mature, and the supply-demand imbalance will exist for a long period of time.

The global Tundish Refractory market size was estimated at USD 1337.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
