The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tuned Mass Vibration Damper competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Tuned Mass Vibration Damper production reached approximately 123,252 units, with an average global market price of around US\$ 3914 per unit. Gross margin is about 45%. The cost is 2,152 usd. Production capacity 140,000 to 160,000 units. A tuned mass vibration damper is a passive vibration control device that significantly reduces vibration amplitude by adding an adjustable mass to a structural system in conjunction with springs and damping elements, thereby tuning the system's natural frequency to the frequency of the vibration source. It is widely used in high-rise buildings, bridges, wind turbine towers, precision machinery, and large industrial equipment to suppress resonance caused by wind loads, earthquakes, or mechanical vibrations. Its upstream mainly includes manufacturers of springs, dampers, precision mass blocks, hydraulic or friction damping components, as well as suppliers of structural materials such as high-strength steel and aluminum alloys; its downstream customers include building structure engineering companies, bridge construction projects, high-rise building developers, wind turbine tower manufacturers, precision equipment manufacturers, and related installation and maintenance service companies. Tuned mass vibration dampers effectively improve structural safety and comfort, especially exhibiting stable and reliable vibration reduction effects in extreme environments.

The global Tuned Mass Vibration Damper market size was estimated at USD 482.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
