The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tungsten Alloy Collimator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Tungsten alloy collimator is a device that shrinks particle beams or light waves. Shrinking means making the particle rays go in a specific direction, that is, only allowing rays parallel to the collimator to pass through or making the space cross-section beam narrower to limit the amount of radiation. Tungsten alloy collimator is a component of the radiation head of medical accelerator. In addition to the primary and secondary collimators, the electron beam limiter is equipped under the radiation head for the collimation of electron radiation. Its main function is to limit the range of electron radiation in order to protect normal tissues outside the target area and prevent vital organs from being irradiated.

The global Tungsten Alloy Collimator market size was estimated at USD 633.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
