## Abstracts

Tungsten alloy shielding products are specialized items engineered to protect against ionizing radiation. Composed primarily of tungsten combined with other elements like nickel, iron, or copper to form alloys, these products leverage tungsten's high atomic number and density. This unique combination endows them with exceptional radiation attenuation capabilities, enabling them to effectively absorb and block various forms of radiation, including gamma rays and X-rays. They come in a diverse range of forms, such as containers for safely storing and transporting radioactive materials, shields for safeguarding sensitive equipment or personnel in radiation environments, and components integrated into larger radiation protection systems. Their robust construction and reliable shielding performance make them indispensable in industries such as nuclear energy, medical diagnostics and treatment, industrial radiography, and scientific research, where protection from the harmful effects of radiation is of utmost importance.
