Abstracts

Tungsten carbide micro drills are precision cutting tools typically ranging from 0.1mm to 3mm in diameter, manufactured from tungsten carbide due to its exceptional hardness, wear resistance, and ability to maintain sharp cutting edges under high rotational speeds and mechanical stress. These micro tools are engineered for ultra-precise drilling applications in hard, brittle, or abrasive materials where conventional high-speed steel drills would fail prematurely or lack the required dimensional stability. Key characteristics include specialized geometries such as parabolic or straight flutes, customized point angles, and surface coatings like TiN or diamond-like carbon (DLC) to enhance performance, chip evacuation, and tool life in demanding micro-machining operations.

The global Tungsten Carbide Micro Drill market size was estimated at USD 2850.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
