Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tungsten Hexachloride competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Global tungsten hexachloride production reached 462 tons in 2024, with an average selling price of US\$131 per kg. Tungsten hexachloride is an inorganic compound formed by tungsten and chlorine. It appears as dark purple or bluish-black crystals with the chemical formula WCl_6 and is the highest-valent chloride of tungsten. Tungsten hexachloride is highly hygroscopic, volatile, oxidizing, and corrosive. It is typically produced by high-temperature chlorination of metallic tungsten or tungsten oxychloride. It is chemically reactive and rapidly hydrolyzes in contact with water or moist air. It also has a strong electron affinity. Tungsten hexachloride is widely used as a catalyst in organic synthesis (such as olefin polymerization, hydrogenation, and chlorination reactions), in chemical vapor deposition (CVD) of tungsten thin films or tungsten compound thin films, as a material for infrared optical coatings, and as a precursor for metallic tungsten and tungsten compounds. It is a strategic material in the semiconductor and specialty coatings sectors, and plays a vital role in aerospace, electronics, optics, and fine chemicals. Globally, demand for tungsten hexachloride is driven by the growth of the semiconductor manufacturing, optical coating, and specialty chemicals industries. With the continued development of high-tech industries and sectors such as aerospace and military, the demand for tungsten alloys is also increasing, thus presenting a promising market prospect for tungsten hexachloride. In particular, demand for tungsten hexachloride has been growing annually in regions such as China, the United States, and Europe, driven by accelerating industrialization. The Asia-Pacific region (particularly China, Japan, and South Korea) is the primary production and consumption region, while Europe and North America maintain

technological advantages in high-purity and electronic-grade products. In the future, with the growth of high-end electronic materials and advanced manufacturing, demand for high-purity tungsten hexachloride will continue to increase.

The global Tungsten Hexachloride market size was estimated at USD 60.52 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
