Report Overview

Tungsten armor-piercing projectiles, generally referring to tungsten alloy (W-Ni-Fe and W-Ni-Cu) armor-piercing projectiles, do not contain explosives, but use kinetic energy to penetrate the target and must be able to withstand the impact of penetrating armor plates. Armor-piercing rounds designed for this purpose have a greatly reinforced casing and a specially hardened and shaped nose. Tungsten alloy AP rounds are also used as small arms ammunition, primarily as anti-materiel ammunition, for armored vehicles, concrete bunkers, tanks, and other defensive installations, depending on the caliber of the gun. This ammunition consists of an armor-piercing bullet made of tungsten alloy or tungsten carbide encased in a softer casing such as copper or aluminum. Product ammunition ranges from rifle and pistol caliber cartridges all the way to tank cartridges
