Report Overview

Tungsten-rhenium wire is often chosen for defrosting wires in aircraft and automobile windshields because it has sufficient strength to withstand high temperature fabrication, and for emission filaments and cathode heaters in X-ray tubes and other vacuum electronics, tungsten-rhenium Filament extends filament and cathode heater life, reduces current ramp over life, reduces brittleness, and improves shock resistance. At operating temperatures of 1,000 to 1,300 degrees Celsius, tungsten-rhenium alloy wire provides up to 70 percent higher hot strength. Additionally, the higher resistivity allows for a 10% increase in wire diameter, which improves filament strength and ductility after annealing. By using this material, lighting designers have increased the life and reliability of vacuum cleaners, refrigerators, display cases, aircraft and vending machine lights by five times.
